

## Lab 4.2 - Setting a Breakpoint Using a Code Keyword

The labs-2 folder has an **app.js** file, edit the file so that when started in Inspect mode it will pause in the first line of the `£` function.

To verify, start the **app.js** file in Inspect mode (without breaking before user code starts). Connect Chrome Devtools, and ensure the "Sources" tab is selected. All being well, the application should be paused at line 2.
