

Training & Certification

Lab 14.1 - Identifying OS and Exiting

The labs-1 folder contains an empty `index.js` file and a `test.js` file.

The `test.js` file contains the following:

```
'use strict'
const { spawnSync } = require('child_process')
const assert = require('assert')
const { status, stdout } = spawnSync(process.argv[0], [__dirname])

assert.notStrictEqual(status, 0, 'must exit with a non-zero code')
assert.match(
  stdout.toString(),
  /^(d|w|l|aix|.+bsd|sunos|gnu)/i,
  'must output OS identifier'
)
console.log('passed!')
```

In `index.js` use `console.log` to output the operating system identifier. Ensure the process exits with a non-zero exit code.

Run `node test.js` to verify whether the task was successfully completed, if it was `node test.js` will output `passed!`.
